SUMMARY

Software Engineer with 2 years of experience in full stack development and 6+ years of building personal projects. Active contributor to the Utah Robotics Club's codebase and sole developer of a custom card game engine. Quickly adaptable to any technology that is right for the project.

EXPERIENCE

Reputation.com - Lehi, Utah

Software Engineer I

Jan 2023 - Jan 2025

- Refined and expanded the Go engagement data pipeline, increasing throughput by 5% to handle a broader range of metrics
- Architected and developed metric and engagement modules with React and Node.js for user analytics
- Designed alert system for rapid user response to social media campaigns via RabbitMQ in Node.js handling 1000+ alerts daily

PROJECTS

Custom Card Game Engine

Architected and created a full game engine for the card game "Arkham Horror LCG" in a highly modular fashion to support a wide variety of current and future game mechanics. Players may play solo or up to 4 cooperatively, all while the engine manages the complex rules and interactions instead of the players. Main game built with Lua, with an auxiliary card-to-code parser built in Rust.

Utilized: Lua, Rust

Collaborative Worldbuilding Website - [URL](#) - [Repository](#)

Designed and developed website in which users collaboratively create, vote, and build off of each other's works to develop one fluid story. Built with an Angular frontend, NestJS backend, and GraphQL API, hosted on AWS ECS. CI/CD implemented in Github Actions

Utilized: AWS, NestJS, Angular, GraphQL, Postgres, GitHub Actions

SKILLS

Languages: Rust, C#, Go, Java, JavaScript, TypeScript, SQL, Python, HTML/CSS

Tools: Docker, Postgres, GitHub Actions, AWS, Node.js, React, Angular, Linux, ElasticSearch

EDUCATION

University of Utah - Salt Lake City, Utah

Bachelor of Science, Computer Science

Dec 2026
